

Bitcoin Seed Phrase Recovery Sheet

This sheet is designed for long term storage of one Bitcoin Seed Phrase. Print it on paper and secretly write down your 24 seed phrase words by hand.

What is this?

The 24 words below together make up a secret "seed phrase" constructed according to the Bitcoin BIP39 standard. A seed phrase is a list of words which store all information needed to recover a Bitcoin wallet.

An additional *passphrase* (a long password, sometimes called the 25th word) is another component of the BIP39 standard. Depending on the intended use of the seed phrase below, a BIP39 pass phrase may or may not be necessary.

For security reasons, the secret words ***should never be entered into a computer***. When the time comes to access the bitcoin (or other secret information) protected by this seed phrase, it is recommended that a ***hardware wallet*** is used. A hardware wallet is an ultra-secure device built specifically for this purpose. It can generate many different private keys from one seed phrase, and each private key can, in turn, generate a public Bitcoin address, using a one-way cryptographic function.

Seed Phrase Words

1. _____	13. _____
2. _____	14. _____
3. _____	15. _____
4. _____	16. _____
5. _____	17. _____
6. _____	18. _____
7. _____	19. _____
8. _____	20. _____
9. _____	21. _____
10. _____	22. _____
11. _____	23. _____
12. _____	24. _____

Storage

It is recommended to make at least two copies of this sheet. The same goes for the pass phrase, if used. Make the copies manually, do not use a copier or a camera. Store all copies in different, safe locations. Most importantly, do not store the seed phrase and the pass phrase in the same location! If possible, use some kind of tamper-evident bag or container.
