## SeedPicker

SeedPicker is a package consisting of a step-by-step guide (this document), and a small script. The SeedPicker guide helps you generate your own 24 word BIP39 seed phrase, with transparent randomness and a trustless computer environment. By creating randomness from physical objects (raffle tickets and one 6-sided die), the user can convince himself/herself that no hacker can influence the randomness or the resulting seed.

The accompanying script calculates the 24th word of the seed, and the instructions make sure the script is run in a completely secure environment.

This guide aims to educate the reader about security practices in a learning-by-doing fashion. It does not make any guarantees or promises, and obviously cannot take any responsibilities whatsoever regarding how the reader chooses to use it.

## What you need

- A PC or laptop capable of running Ubuntu. Almost any old computer will do. A hard drive is NOT needed.
- A CD or a USB Stick prepared with Ubuntu Live. CD is recommended (usually easier for newbies, and completely read-only). If you haven't created one of those before, the following tutorial is a good starting point: bit.ly/2QD8mjC
- A printer.
- A pair of scissors.
- A single 6-sided die
- A small bag or box to put the raffle tickets in. An ordinary plastic bag works fine.
- A printout of this pdf. This is really important!!! Print this pdf now and continue reading
  from the printout. (The only parts that absolutely unconditionally have to be printed are the
  Seed Form and the Raffle Tickets, but it is recommended that you print the whole pdf)

#### Part 1: Generation of 23 random words

Human beings are really bad at randomness! When randomness is important, you should never rely on something that comes from your brain! Modern computers are slowly getting better at randomness, but it is still difficult to make computerized randomness transparent. In other words, it is hard to convince humans that a random number has been created in a truly random fashion. This is the reason most public lotteries use physical and transparent lotto machines instead of using computerized randomness; It is crucial to convince the audience that the randomness is real and not manipulated in any way.

This guide uses a combination of raffle tickets and a six-sided playing die to create very good natural transparent randomness. This is how you do it:

- 1. Use the scissors to cut out the 342 raffle tickets and put them in the bag (or box). Make sure you don't lose any of them. Mix them around thoroughly!
- 2. Use the Seed form, the raffle tickets, and the 6-sided die to draw the first 23 words. Read the instructions on the Seed Form carefully, and make sure to follow them all.
- 3. You should now have a sheet of paper with 23 secret words, generated with a very high degree of randomness. Randomness that you yourself have witnessed and controlled. Don't ever let anybody see what you have written on your Seed Form!

## Part 2: Calculating the 24th word

The last word of a 24 word seed is a checkum word, calculated using the other 23 words. Unfortunately, we need to use a computer for this step. Since we need to enter our super secret 23 words into a computer, it must be a super secure computer! It must be offline and we must make sure all the secret data is completely discarded after shutdown. Follow the steps below to achieve this!

Note that we don't have to trust any of the software that downloaded here! No hacker can change the 23 words that we generated in the previous step. However, we do have to make sure that the secret information will not leak to the outside world, or to future users of the same computer.

#### 2a: Prepare hardware and software

- Open up the computer and remove the hard drive. This step is to convince you that Ubuntu Live will not save anything to the hard drive. If you feel certain that this will not happen, you can skip this step.
- 2. Remove any removable media from the computer.
- 3. Boot up Ubuntu and run it in Live mode ("Try Ubuntu before installing").
- 4. Make sure you have a working Internet connection, wired or wireless (Click the small triangle on the top right of your screen).
- 5. Open Terminal (Press the Windows key and start typing "terminal", then click the Terminal icon)
- 6. Our first commands will install the python dependency manager pip3.

```
sudo apt-get update ← sudo apt-get install python3-pip ← Answer Y at the prompt (This may take a few minutes)
```

- 7. Then we use pip3 to install the library **mnemonic** (A utility library written by Trezor): pip3 install mnemonic  $\leftarrow$
- 8. Using the command **wget**, download the SeedPicker python script called **lastword.py**. It utilizes the **mnemonic** library to calculate the last word.

```
wget -0 lastword.py http://bit.ly/lastword py ←
```

(That's the capital letter O after wget, not a zero)

## 2b: Disable all communication

We now have prepared the hardware and installed all required software. The next step is to go completely offline:

- 1. Pull any network cable.
- 2. Disable all wireless communication (e.g. by enabling airplane mode).
- 3. Make absolutely sure you are now offline, and from now on: **Don't go online again until** after you have restarted the computer!!
- 4. Make sure nobody else can see your screen!
- 5. Make sure nobody else can see your keyboard!
- 6. Make sure nobody else can see your Seed Form!

### 2c: Run the script

1. In the same terminal window as earlier, type python3 lastword.py followed by all your 23 secret words (space separated):

```
python3 lastword.py word1 word2 word3 word4 ... word23 ←
```

- 2. When the script has calculated your 24th word, use your pen to type it into the designated cell of the Seed Form.
- 3. Shutdown the computer as soon as possible.

You have now generated a valid BIP39 seed phrase and the only record of it is the Seed Form. Keep it really secret. You may want to make copies and put in different locations.

This guide does not cover how to store your seed phrase securely, so do your research well.

If you intend to use the seed phrase with a hardware wallet, it is recommended to use the **passphrase** feature (sometimes called **the 25th word**) and keep the two phrases separated.

## Seedpicker Seed form - Keep secret at all times!

# **WARNING!** Read instructions carefully!

Never fill this form on a computer! You must print the document and use a pen or pencil.

- As soon as you start writing on this printout, you must keep it secret forever!
- Make sure nobody can see which tickets you draw!
- Make sure nobody can see what you are writing!
- Make sure your writing does not transfer to the surface below!

If you - at any point - suspect that any of the above is not fulfilled, start over from a new printout!

You need **this printout**, the 342 **raffle tickets** (T1-T342), a **six-sided die** and the SeedPicker **lookup table**. Follow the instructions below, line by line. Fill in the empty cells Mix the raffle tickets well between each draw!
